

Instruction Manual

Connect lighting
to pop-up wall

1. Plug the power cable in the extension cord.

2. Plug the extension cord in the wall light.

3. Slide the pop-up wall connector into the grooves underneath the wall light.

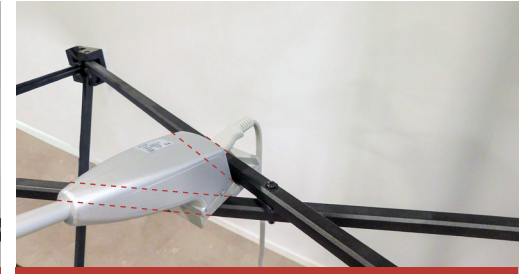

4. Place the connector in between the two bars on one of the crosses on top of your pop-up wall, with the wall light in a vertical position.

5. Slide the connector to the center of the cross, so the front part goes over the first bar and the back part goes underneath the second bar.

6. Gently bring the wall light in a more horizontal position, until it's secured in place.

7. The pop-up wall connector holds itself in place by leaning from the upper bar of the cross.
